1 Introduction

This document covers the deployment of the integration service developed for integrating SiteLock service into WHMCS platform.

2 Deployment

2.1 DEPLOYMENT REQUIREMENTS

Integration service host requirements:

- Server version: Apache/2.2.*
- PHP 7.1.*
- Composer
- WHMCS 7.2.*

2.2 SERVICE DEPLOYMENT

Every service release will be provided in form of package, containing:

- WHMCS.SiteLock-`{release_tag}`.zip file – this is the source code of the integration app
- SiteLock_WHMCS_Integration_Test_Plan_`{version}`.docx
- SiteLock_WHMCS_Integration_Service_Deployment_Guide.docx

To set the application on server:

1. **Copy file to your document root folder** (e.g. `/var/www/html/whmcs`):

- WHMCS.SiteLock-`{release_tag}`.zip

2. Unzip the file

this will unzip the module and addon in corresponding directories

3 Quick User Guide

To be able to use SiteLock's module actions admin should go through these steps:

3.1 ADMIN CONFIGURATION STEPS

- In your browser navigate to `http://default-ip-address/admin/configaddonmods.php` and activate

SiteLock Addon

» Sitelock Addon
Enables SiteLock partners to auto-provision and manage customer accounts within WHMCS.

API User	<input type="text" value="devtech"/>	Partner's username for SiteLock API.
API Password	<input type="password" value="....."/>	Partner's password for SiteLock API.
API Base URL	<input type="text" value="https://api.sitelock.com/v1/partner/"/>	Partner's base URL for accessing SiteLock API endpoints.
Partner	<input type="text" value="Devtech"/>	The desired "brand name" to be used in messaging
Access Control	Choose the admin role groups to permit access to this module: <input checked="" type="checkbox"/> Full Administrator <input type="checkbox"/> Sales Operator <input type="checkbox"/> Support Operator	

- Once activated, click on "Configure" and enter correct reseller credentials along with valid Base URL for API endpoint (at time of writing: `https://api.SiteLock.com/v1/partner`)
- Make sure to tick Full Administrator checkbox and click Save Changes.
- After the Addon has been configured, navigate your browser to:
`http://default-ip-address/admin/addonmodules.php?module=sitelock`
- Once here, click on "Get Plan List for {ResellerName}" button.

Sitelock Addon

Create SiteLock products offer.

Product Name	Description	Type	Price	Term	Created
SiteLock 911 - One-time Fix Scan	A one time SMART clean to restore the security of your site.	addon	199.00	0	✘
SiteLock Find: Scan	A virus scan for your website - identify any malware on your site	plan	24.99	12	✘
SiteLock Fix: Scan	Identify and remove malware; find vulnerabilities that could lead to future compromise	plan	99.99	12	✘
SiteLock Accelerate: TrueShield CDN (1)	Accelerate dynamic websites.	addon	10.00	1	✘
SiteLock Accelerate: TrueShield CDN (12)	Accelerate dynamic websites.	addon	100.00	12	✘
SiteLock Prevent: TrueShield WAF	Advanced website acceleration and enterprise-grade website firewall to prevent bad bots and targeted attacks	addon	300.00	12	✘

SiteLock WHMCS Integration

Service Deployment Guide & Quick User Guide

- After the list has been created, click *Create Products* – this action will automatically create Product Groups and populate them with products accordingly.

3.2 PROVISION PLAN/ADDON

- To check if the products are available from end user side, switch to client area (assuming the test client account is available) and buy product/service as a client (Services->Order New Service).

- Once the buying process has been finished, you should go back to admin area and provision the service by entering the Domain and clicking on the button "Create", you can find this button on Clients->Product/Services page.

- If the Domain input field remains empty it will provision a Parked site.

3.3 REMOVE PLAN/ADDON

- To remove Plan/Addon from SiteLock click the *“Terminate”* button on the desired Product.

3.4 REMOVE PLAN/ADDON

- Deleting clients account from WHMCS dashboard will also delete the account from SiteLock. Navigate to <http://default-ip-address/admin/clients.php>, click on desired account and on the right-hand side (see the picture), click *“Delete Clients Account”*. This will remove the client from SiteLock and delete the account from WHMCS simultaneously.

4 SiteLock API Proxy Web Service

SiteLock offers an API Proxy to reduce the need for constant IP whitelisting by SiteLock for every new machine that provider adds to its network of machines that are using SiteLocks API.

To use this service, you need to obtain SiteLock API Proxy package and deployment guide.

You will need to setup a dedicated server or VPS and deploy said Proxy service. After that you can contact SiteLock to have that Proxy machine whitelisted and you can use IP address of that machines or domain name instead of SiteLocks API endpoint for SiteLocks WHMCS & cPanel addons.

To obtain API Proxy package, deployment guide and for any further information please contact SiteLock support.
